

A DESOLATED EARTH

DEFINITION

Biodiversity is the variety of all life form.
Biodiversity loss damages essential services provided by nature.

It is related with deforestation.
Reduction of plants means reduction of biodiversity.

CAUSES

- Pollution.
- Introduction of exotic species.
- Climate change.
- Over-exploitation.
- Alteration and loss of the habitats.

CONSEQUENCES

- Species richness
- Species composition
- Species interactions
- Ecosystem stability

POSSIBLE SOLUTIONS

- Establish more protected areas free of humans.
- Stop climate change from running out of control.
- Stop deforestation.
- Reduce the environmental pollution.
- Protect native ecosystems from invasive species.
- Biodiversity needs to be more studied.
